

What do we fund when we fund ageing?

A public report for people who want
to see where research money goes.

One portfolio. One funding period.
A source behind every award.
An estimate whose method travels with it.

THE SHARE WE WANT TO MEASURE

Ageing biology
+ ageing interventions

All classified
ageing research funding

Weighted by award amounts.
Care delivery and pensions are excluded.

Two portfolios. Every award traceable.

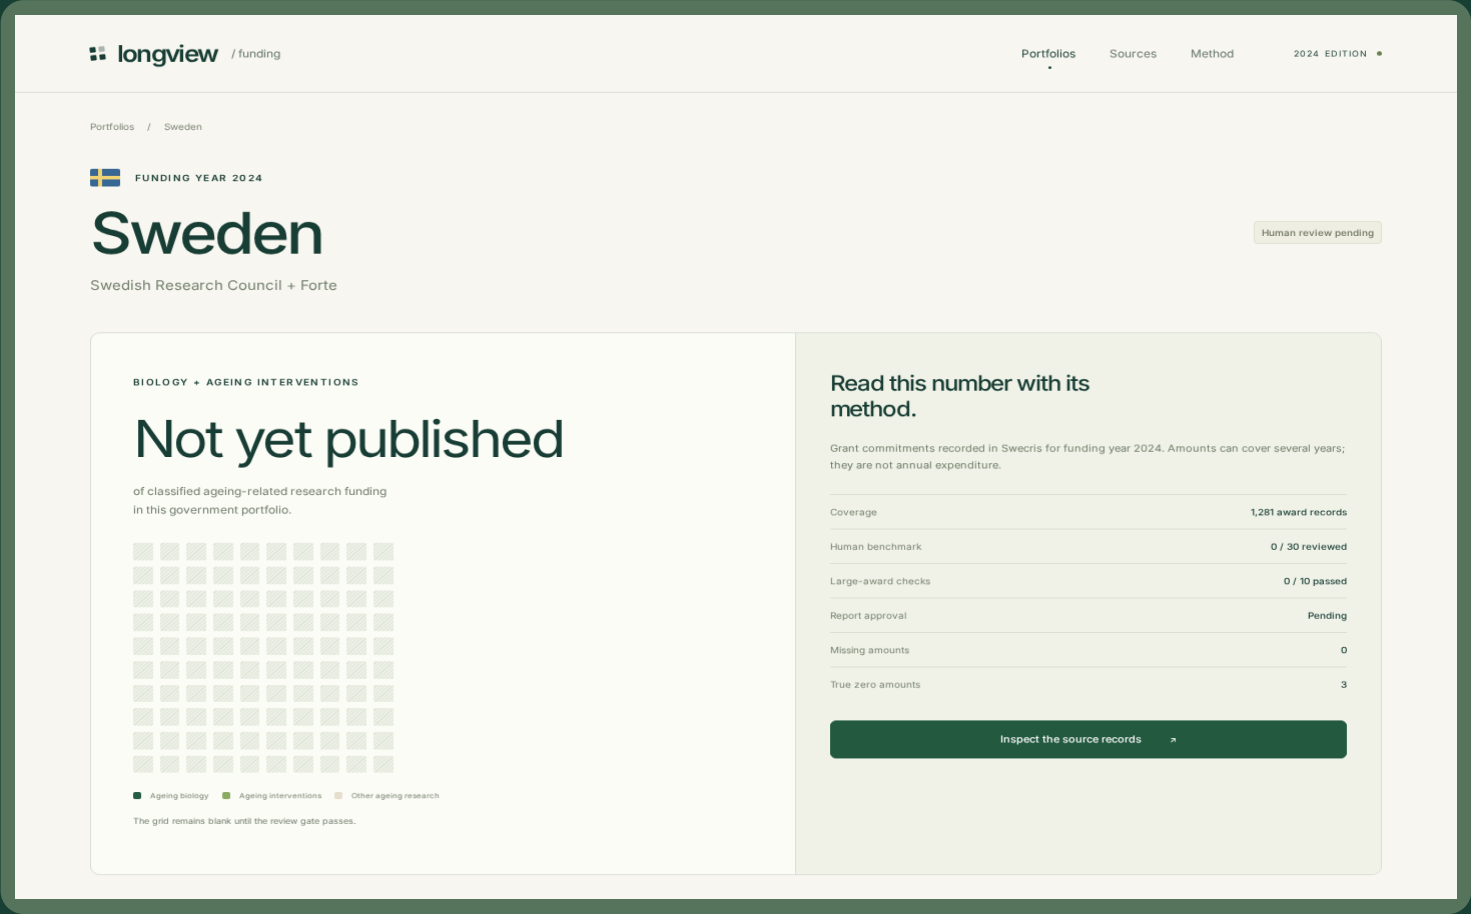

6,623

official-source award records

Sweden: 1,281
Research Council + Forte

United States: 5,342
NIA-administered awards

Open a portfolio. Inspect an award.
Follow its source and funding period.

The estimate waits for human review.

FROZEN, BLINDED BENCHMARK

$\geq 90\%$ overall AND
in each country

0 / 60 reviewed

Accuracy not yet measured.
Software checks do not count as human evidence.

WHAT CAN CHANGE THE ANSWER

Biology hidden under disease labels.
Mixed objectives in large awards.
Unresolved classifications and missing amounts.
Different portfolio and funding-period coverage.

10 large-award checks per country,
plus human approval of scope and arithmetic.

Next: settle the biological boundary, complete review, then test whether five readers understand the report.
